About Us

IMWell Health is a healthcare company that specializes in delivering on site primary care and diseases management services for employers with self funded health plans. Our services supplement the existing healthcare benefit plan. We collaborate closely with your existing PPO, PBM and medical management vendors.

Our service model deploys licensed and certified healthcare professionals to the clinic site for two primary reasons. The first is hassle free and convenient access to high quality healthcare for employees and covered family members. The second is treatment that is focused on improving patient health status, which reduces absenteeism and increases employee productivity.

Headquartered in Fort Smith, we currently serve clients in Arkansas and Oklahoma.

Clients

IMWell Health, LLC provides service to many different types of clients. Our clients include manufacturers, poultry processing, municipalities and a university. These are mid-size to large businesses that self fund their healthcare benefits. They recognize the financial benefits in placing emphasis on chronic disease management and convenient access to high quality healthcare.

IMWell Health is focused on improving and maintaining the health status of employees and covered dependents and therefore assisting in the control of healthcare costs for its clients.

Services

Our clinics are focused on the treatment of illnesses and the improvement of health status for all participants.

Services include, but are not limited to:

- Primary care clinic services for the diagnosis and treatment of common diseases
- Prescriptions will be phoned or sent electronically to the patient's choice of an area participating PBM provider
- Collection of urine and blood specimens for outsourced lab work
- Minor procedures to include suturing, simple biopsies, EKGs
- Wellness exams, history and physicals
- Wound care
- Gynecological exams, routine Pap smears
- Chronic disease evaluation, monitoring and care management
- Health risk assessments
- Wellness programs

The disease management programs produce a number of expected results to include:

- Reduction in ER visits
- Increased generic drug utilization
- Reduction in the rate of catastrophic cases due to preventable hospitalizations
- Healthier, more productive employees

The primary care clinic will produce added benefits as follows:

- Increased productivity from minimizing employee time away from work while assessing high quality healthcare
- Lab fees at cost or discounted fee for service
- Prescriptions sent to preferred pharmacy for convenient pick up
- Enhanced benefit can be expected to reduce employee turnover
- Reduced cost for primary healthcare
- Improved steerage/referral for specialty care
- Fixed cost approach or discounted fee for service

Wellness programs managed by the clinic may include:

- Administration of flu shots
- Evaluating health risk assessment forms.
- Distribution of educational materials
- Weight loss, smoking cessation and exercise program counseling
- Coordinate employee health fairs
